

	Page.
Fig. 162. In <i>A</i> and <i>B</i> we have vertical sections from W. to E. through ordinary bajirs and dune accumulations in the region where the meridional Tarim now is situated. In <i>C</i> we have to the left (W.) the new-comer, the Ettek-tarim, and to the right (E.) the Ilek. In <i>D</i> the Ettek-tarim is dry, the sand accumulation is covering its old bed, the present Tarim is formed in the middle of the section, and to the right is still the Ilek with its western bank swept free from sand. The figure shows how the rivers have always made their courses in the existing chains of bajir-depressions . . . . .	340.
» 163. Vertical section of depressions . . . . .	341.
» 164. The same . . . . .	341.
» 165. Forest on the banks of the Ilek, below Kum-tscheke . . . . .	342.
» 166. Vertical section of lakes . . . . .	343.
» 167. East shore of Arka-köl. View looking south, showing sand-dunes proceeding towards the west across the lake; in the middle dead forest; to the right fresh vegetation on the very shore of the lake . . . . .	343.
» 168. Advancing dunes . . . . .	344.
» 169. Part of Sadak-köl in 1896, showing a regular bajir-depression filled with water. The dead forest shows, that there was an early wet period followed by a dry period, which killed the toghraks. At the present time the depression is once more filled . . . . .	346.
» 170. Nias-köl; a specimen of an old bajir-depression filled with water . . . . .	347.
» 171. Another view of the same . . . . .	347.
» 172. Thick forest at Katak, Camp XIX, Kerija-darja, 1896 . . . . .	350.
» 173. Sand-dunes bound by vegetation, at Kulatscha; Kerija-darja . . . . .	351.
» 174. The migration of Lop-nor . . . . .	364.
» 175. Jardangs . . . . .	364.
» 176. Vertical section of a jardang . . . . .	365.
» 177. View of the Kuruk-tagh at Kalka; towards the NNW. The transverse valley of the Kontsche-darja coming down from Baghrasch-köl . . . . .	393.
» 178—179. The dunes of Ak-bel-kum . . . . .	394.
» 180—182. Movements of dune-masses . . . . .	401, 402.
» 183. The Masar of Ordan Padschah . . . . .	406.
» 184—186. Dune- and wave-movements . . . . .	420, 421.
» 187. A sand-dune near Anau in Transcaspia . . . . .	425.
» 187. Ripple-marks on the crest of a dune. Desert of Lop . . . . .	428.
» 188. Different patterns of ripple-marks. Desert of Lop . . . . .	429.
» 189—193. Movements of dune-masses . . . . .	431—434.
» 194. A dune advancing with the same speed because the mass remains the same all the way . . . . .	438.
» 195. A dune advancing slower as the mass increases . . . . .	438.
» 196. A dune advancing quickly as its mass decreases . . . . .	438.
» 196. A solitary toghrak north of the end of the Kerija-darja . . . . .	440.
» 197. The valley of Tollan-chodscha on the upper road . . . . .	456.
» 198. Our caravan in the desert of Gobi . . . . .	457.
» 199. Cylinders of sand . . . . .	465.
» 200. A wind-worn stone, quartzitic sandstone. From the desert of Lop . . . . .	469.
» 201. Thick scrubby steppe north of Astin-tagh . . . . .	473.
» 202. First glimpse of the desert range . . . . .	474.
» 203. Parts of the desert range seen from the south . . . . .	475.
» 204. Vertical section of terrace . . . . .	475.
