

Eastern *Pamir*, Mus-tagh-ata, Kamper-kishlak, near the glacier, on a wet meadow, ca. 4500 m., 29th July 1894 (flowering).

N. E. *Tibet*, Camp XXV, south of Arka-tagh, 4980 m., 29th June 1901 (flowering).

The Pamir specimens belong to var. *pseudo-hirculus* (Schrenk) Trautv. (in Bull. Soc. Moscou 1860, 68), the Tibetan ones are young and dwarfish.

*Geogr. area*: Afghanistan, Turkestan, Pamir, Himalaya, Tibet, Mongolia, Dahuria, Siberia.

*Ranunculus hirtellus* Royle, Illustr. Bot. Himal. (1839) 53; Stewart, in Bull. Torrey Bot. Club (1916) 633.

*Tibet*, no locality (flowering).

The incomplete specimen agrees well with some specimens of *R. hirtellus* from HOOKER f. and THOMSON'S collections.

*Geogr. area*: Himalaya, Tibet.

*Ranunculus aquatilis* L., Sp. pl. ed. 1 (1753) 556; Hemsley, in Journ. Linn. Soc. 35 (1902) 162; Stewart, in Bull. Torrey Bot. Club (1916) 633; Fedtschenko, in Acta Horti Petrop. XXI (1903) 247; XXIV (1905) 318 (var. *pantothrix* Ledeb.).

Eastern *Pamir*, Moraine lake between the glaciers Koch-korchu and Korumde on the western side of Mus-tagh-ata, 4367 m., 28th July 1894 (flowering and fruiting); Freshwater pool in the valley of Ulutör, Taghdumbash-Pamir, 4589 m., 3rd Aug. 1895 (no full flowering nor fruit present).

*Tibet*, without locality (1901, fruiting); S. W. *Tibet*, the dry, old bed of Satlej, in small lagoons, west of Rakas-tal, the former outlet of the lake, 4589 m., 6th Sept. 1907 (with a few fruits); the valley of the Upper Tsangpo, Camp CLXXXIX, Dongbo, 4598 m., 29th June 1907 (flowering).

The very variable water-buttercups are difficult to name, and I have preferred to refer all the specimens collected to the collective name *R. aquatilis* L. None of them have any floating leaves. Those from Dongbo (Tsangpo valley) are referable to *R. pellatus* Schrenk, f. *pseudofluitans* (Hiern., in Journ. Bot. 1871), others are probably better placed under *R. paucistamineus* Tausch.

*Geogr. area*: Northern temperate hemisphere, especially common in Eurasia, more local in North America.

*Thalictrum alpinum* L., Sp. pl. ed. 1 (1753) 545; Hemsley, in Journ. Linn. Soc. 35 (1902) 162; Fedtschenko, in Acta Horti Petrop. XXI (1903) 244.

Eastern or Inner *Tibet*, Camp XLIV, 5127 m., 18th Aug. 1901 (no flower).

*Geogr. area*: Arctic and subarctic Eurasia, northern and alpine Europe, Siberia, Mongolia, Kansu, Tibet, Himalaya, Yunnan; Arctic and subarctic North America incl. Greenland, Rocky-Mountains.

*Clematis alpina* (L.) Mill., Gard. Dict. ed. 8 (1768) no. 9; Hemsley and Pearson, in Peterm. Mitteil., Ergänzungsbd. 28 (1900) 373; Hemsley, in Journ. Linn. Soc. 35 (1902) 161.
