

the camp fires still marked. The springs which had supplied us in 1896 were almost dry, but another was found. Dalbir Rai and I betook ourselves to survey operations, but the ground about "Fever Camp" did not admit of sufficiently long bases, and we sent a man to look for water ten or twelve miles to the east, where, at the foot of high mountains, there was abundance of grass. The search was successful, and we moved our camp to the new ground. To make sure of obtaining good trigonometrical values for the longitude of this camp (No. 110), we joined the triangulation carried out there to that performed at "Fever Camp." By this means bases of about eight to twelve miles were obtained and connection made with the survey executed in 1896. Still, much remained to be done, for the chain of triangles begun at Aksu was not yet satisfactorily linked to that of "Fever Camp" (Camp 109) and Camp 110.
