	PAGE.
CHAPTER XVIII.....	355-399
Artiodactyla.....	355-358
The pig of Anau I (<i>Sus palustris</i> Rüttimeyer) anatomically compared with prehistoric and recent wild and domestic pigs.....	355-358
Identical with Torfschwein (turbary pig) of European neolithic and bronze-age stations..	355
Cavicornia.....	359-382
Long-horned wild ox (<i>Bos namadicus</i>).....	359-364
Anatomically compared with fossil and prehistoric bovids of Eurasia and Egypt....	359-369
Domestic long-horned cattle (<i>Bos taurus macroceros</i>) of Anau I.....	
Anatomically compared with wild and domestic cattle of Eurasia and Egypt.....	364-369
Domesticated out of the wild <i>Bos namadicus</i> of Anau I.....	369
Identical with the long-horned Apis of early Egypt.....	369
Ovina. Wild sheep of Anau I (a) (<i>Ovis vignei arkal</i>) anatomically compared with Eurasiatic forms.....	370-372
Domestic sheep of Anau I.....	372-380
Progress of domestication out of <i>Ovis vignei arkal</i> shown in changes in size, and in character of bone structure.....	372-373
Towards end of Anau I a smaller breed established identical with <i>Ovis aries palustris</i> Rüttimeyer, the Torfschaf of European neolithic and bronze-age stations. Anatomically compared with the wild ancestor and with domestic sheep of prehistoric Europe.....	374-376
First breed (large horned).....	376
Hornless breed of Anau II.....	376-380
Tables of anatomical comparisons.....	374, 375, 377-379
<i>Capra hircus rüttimeyeri</i> Duerst. Domestic goat of Anau II, anatomically compared....	380-381
Antelopinae. Gazelle of Anau I.....	382
Cervidae. The stag of Persia.....	382
Camelidae. Camel of Anau II.....	383-384
Perissodactyla. Horse of Anau.....	384-399
Distinguishing anatomical characteristics of Western and Oriental horse groups and asses.	386
In the teeth (tables).....	387, 388, 390
In the bones (tables).....	391-395
Type and relations of the horse from Anau.....	396-399
The diluvial horse differentiated into three types: Desert type (<i>Equus caballus pumpelli</i>), Steppe type (<i>Equus caballus germanicus seu robustus</i>) and Forest type (<i>Equus caballus nehringi</i>).....	399
Tortoise (<i>Testudo horsfieldii</i> Gray).....	399
CHAPTER XIX. THE HORSE OF ANAU IN ITS RELATION TO HISTORY AND TO THE RACES OF DOMESTIC HORSES.....	401-431
Oriental and occidental horse groups.....	401
Fossil and subfossil horses.....	402
Horse of the Quaternary period of Europe.....	402
The horses of prehistoric times.....	403
The horses of the Neolithic Age.....	403
Craniological differences between the ass and horse.....	404-410
The horses of Europe in the Copper, La Tène, Hallstadt, and Roman periods.....	410
Skulls of the prehistoric horses.....	411
Teeth.....	411-414
The skull and its proportions.....	414-417
The bones of the extremities.....	417-426
Calculated sizes of the prehistoric horses.....	426
Conclusions.....	427
Application of the measurements to determination of the relationship of the various prehistoric horses among themselves and to the horse of Anau.....	427
The Tertiary horses of Europe.....	428
Only one type of wild horse over Europe and Asia in Pliocene and Pleistocene time; probably <i>Equus stenonis</i> Cocchi.....	428
<i>Equus przewalskii</i> its last wild representative.....	428
